

# Afaria Setup 10.1 - Install Afaria 7 - Download installation package and install license

**Author** : Tobias Hofmann

**Date** : August 17, 2015

The steps to install SAP Afaria 7 are:

1. Download installation package and install license
2. SAP Afaria Server
3. SAP Afaria API Service and Administrator
4. Afaria Admin
5. Self Service Portal
6. Enrollment Server
7. Package Server
8. SCEP Plugin-in module

This document is about step 1.

## Download installation package

You can download the SAP Afaria installer from SAP Market Place. In the download section, it can be found under Sybase Products:

### SYBASE PRODUCTS

[Sybase Products](#) → [SYBASE AFARIA](#) → [SYBASE AFARIA 7.0](#)

The installer available there is for SAP Afaria 7.0, made available on 5. 11. 2012.

Download Object	Title	Info File	File Size [kb]	Last Changed
32242355	Sybase® AFARIA 7	<a href="#">Info</a>	942504	05.11.2012

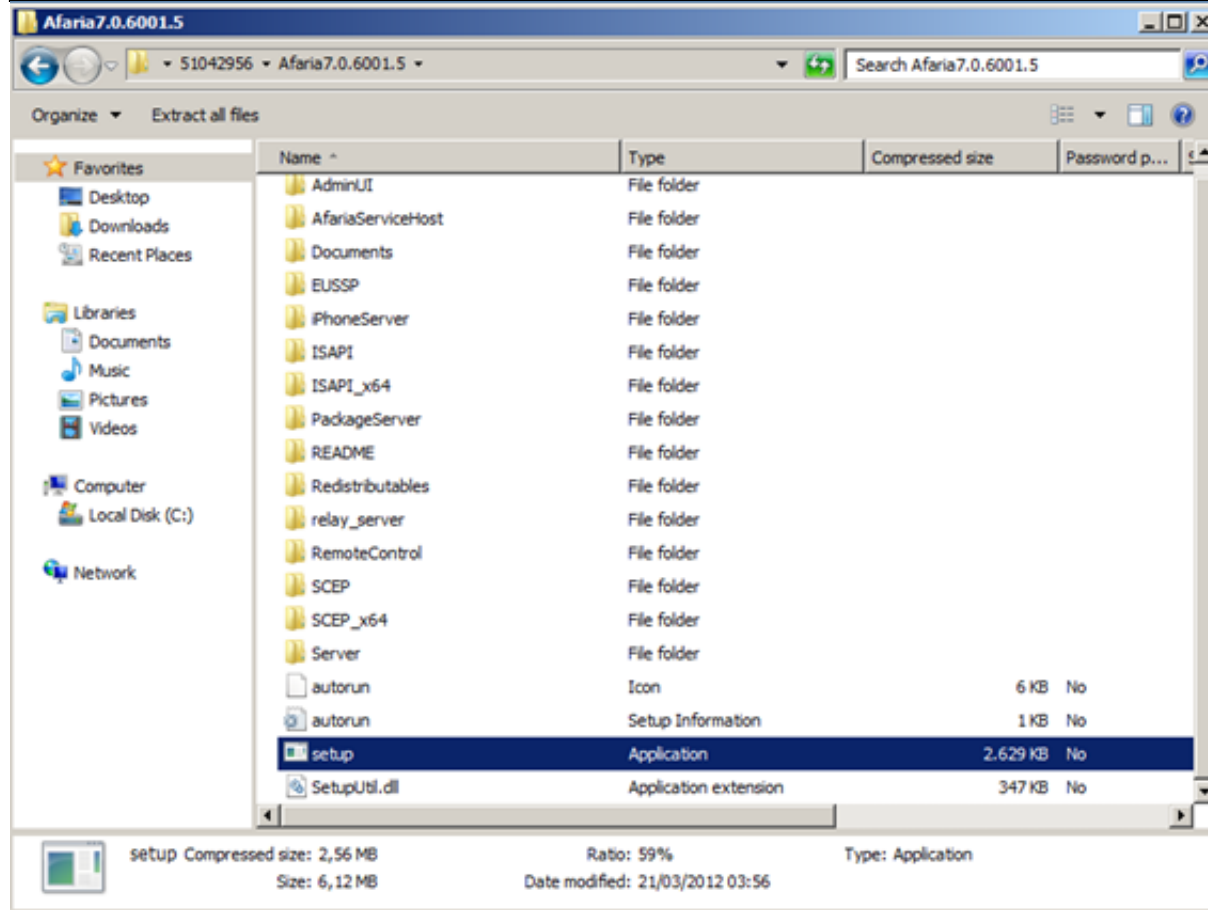

Some newer version of Afaria (7.0 PL5) can be installed directly using the patch file, other versions need to have above version (7.0,PL0) installed. I am going to use the official installation package for showing the installation procedure.

## Install license

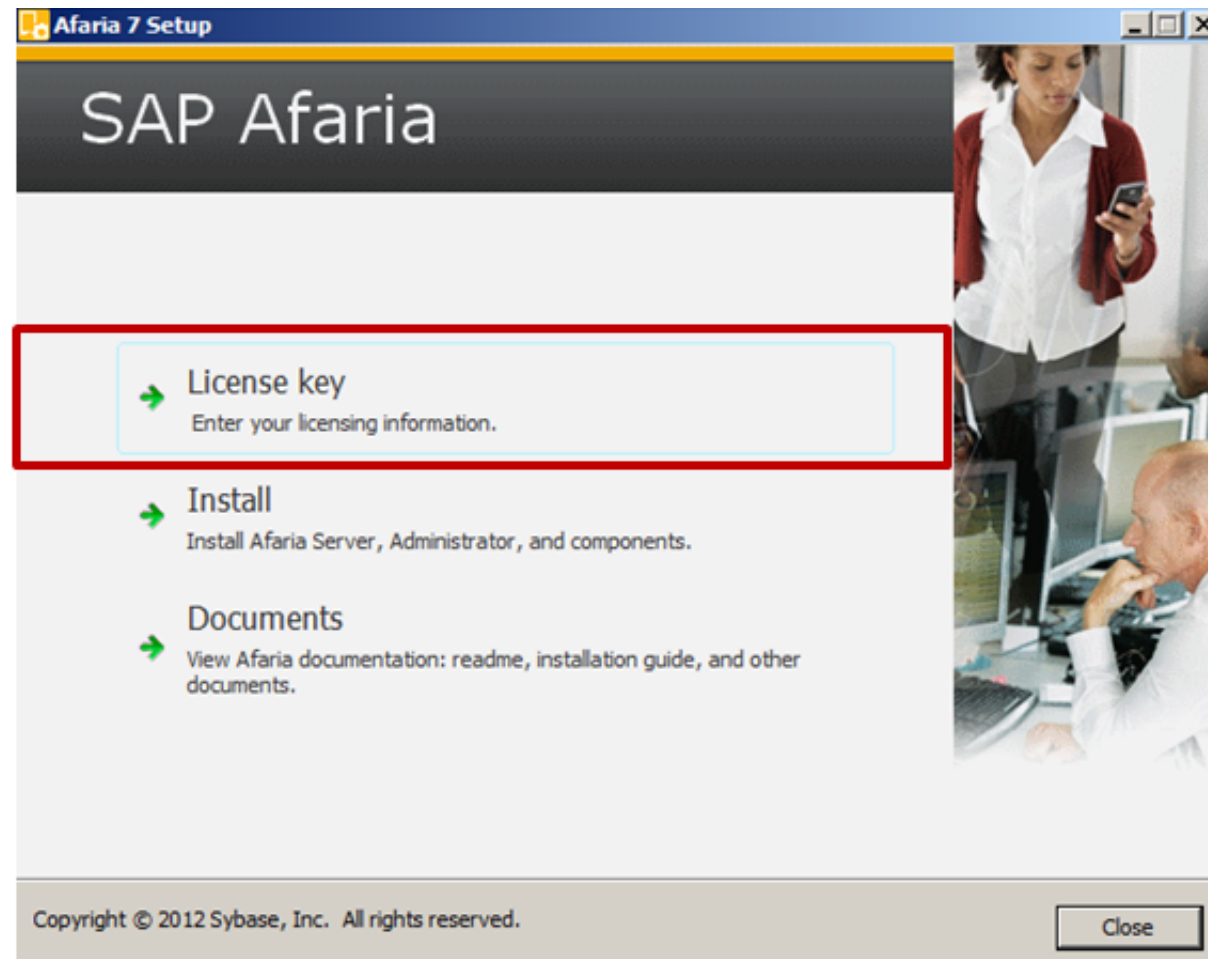

Download the installer, unpack it on Windows Server 2008 R2. Open the Afaria folder and run setup.exe

# It's full of stars!

Where documentation meets reality

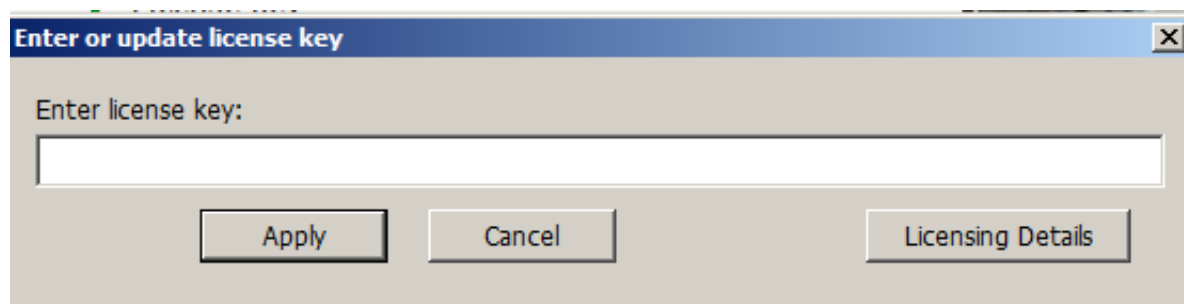

The SAP Afaria installation setup start screen is shown.

## License key

Enter license key

The image shows a screenshot of a Windows-style dialog box. The title bar is blue and contains the text "Enter or update license key" followed by a close button (X). The main area of the dialog is light gray and contains the text "Enter license key:" above a white text input field. Below the input field are three buttons: "Apply", "Cancel", and "Licensing Details".

Click *Apply* and you will return to the start screen. In case the license is valid, you can now start the installation.
