

# SAP Afaria 7 SP6 - Install Self Service Portal

**Author :** Tobias Hofmann

**Date :** September 23, 2015

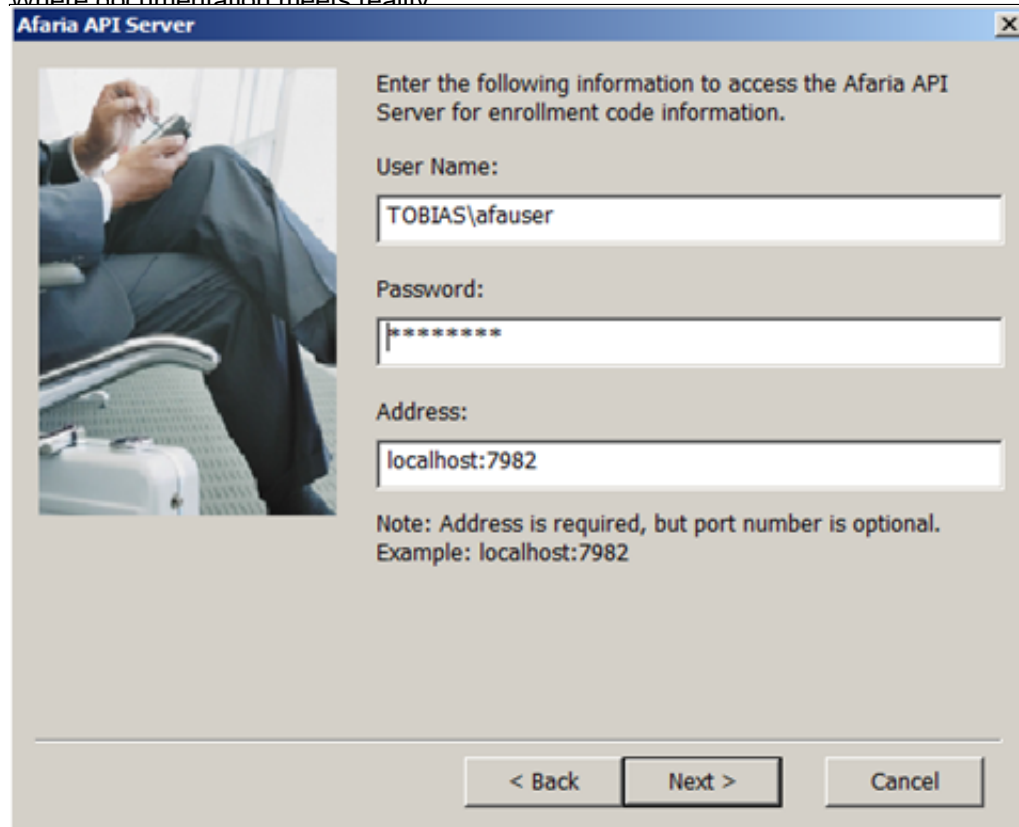

Next component to be updated is the Self Service Portal. This will update the web site hosted by IIS.

Confirm the user credentials used to connect to the API server.

## It's full of stars!

Where documentation meets reality

The screenshot shows a dialog box titled "Afaria API Server". On the left, there is a small image of a person in a suit sitting in a chair. The main area of the dialog contains the following text and input fields:

Enter the following information to access the Afaria API Server for enrollment code information.

User Name:

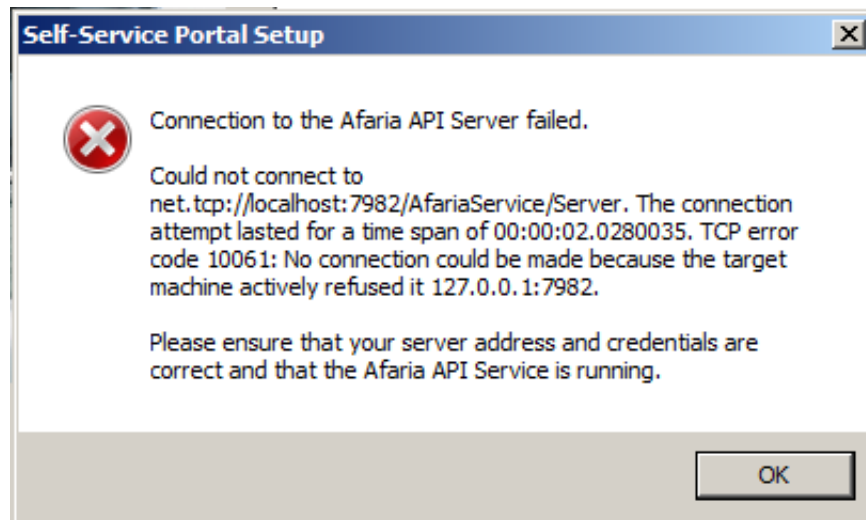

Password:

Address:

Note: Address is required, but port number is optional.  
Example: localhost:7982

At the bottom, there are three buttons: "< Back", "Next >", and "Cancel".

**Possible error:** API server cannot be reached

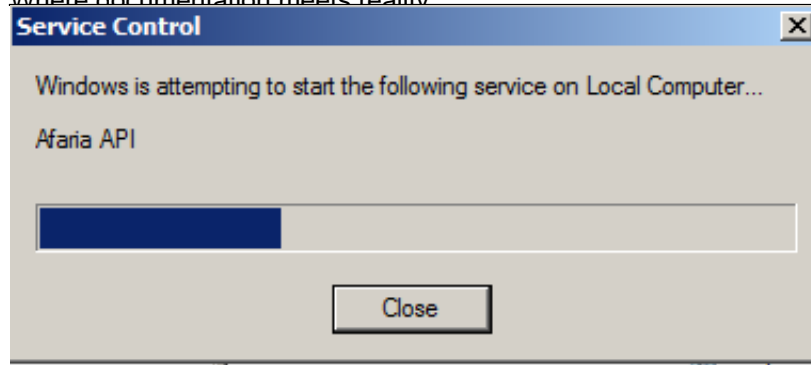

**Solution:** check if API server is up and running

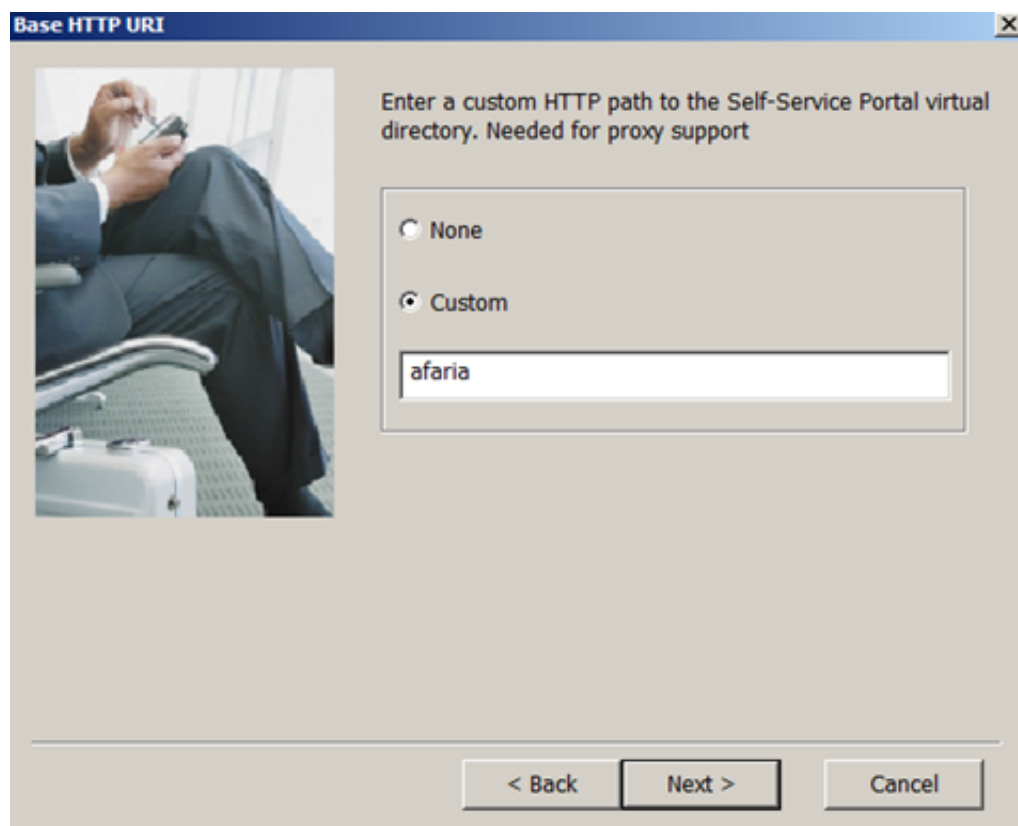

If not, start the service
