

# Initial setup of Personas 3 - 1- Change Profile Parameters

**Author :** Tobias Hofmann

**Date :** April 18, 2016

The Personas 3 [configuration guide](#) contains all the information you need. At least two profile parameters need to be changed to ensure that the Personas 3 health check passes:

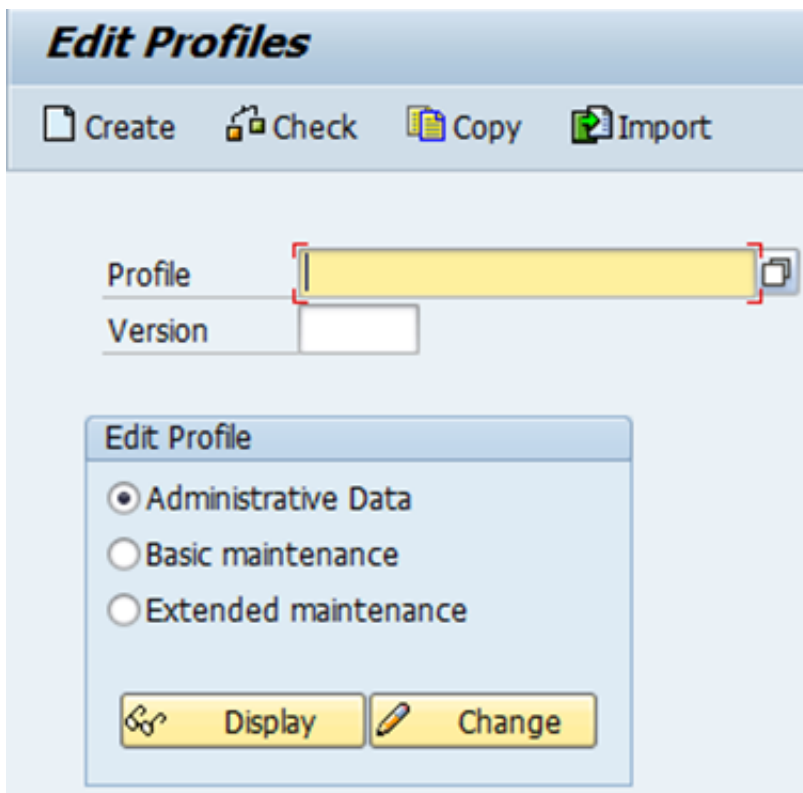

- em/global\_area\_MB
- ztta/diag\_area

## em/global\_area\_MB

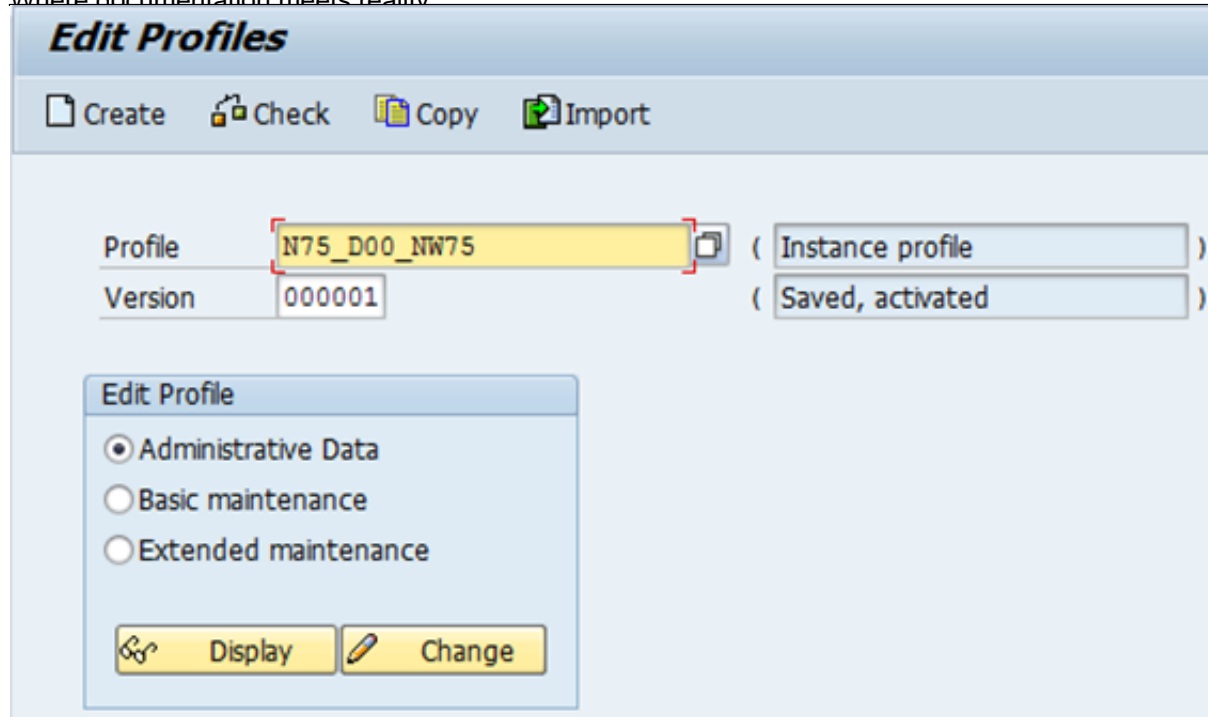

Change profile parameter em/global\_area\_MB to 1GB:

- [SAP Note 1888428](#)
- [SAP Help](#)

Tx: RZ10

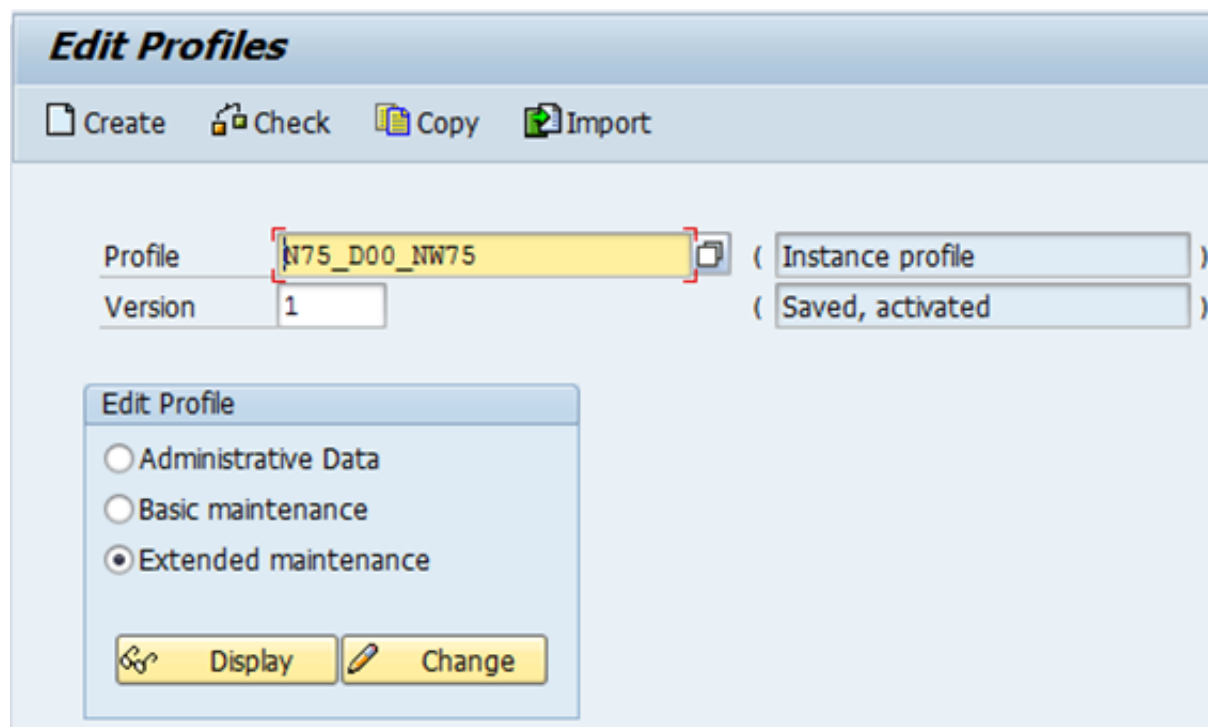

I will run Personas 3 on a demo system, having as only user me. I do not have to change the default value therefore. If you want to or have to change the value, you can do so in the instance profile, under extended maintenance.

## ztta/diag\_area

Change profile parameter ztta/diag\_area to 2<sup>0</sup> MB.

- [SAP Note 204502](#)

## It's full of stars!

Where documentation meets reality

**Maintain Profile 'N75\_D00\_NW75' Version '000001'**

Copy Line Line ▲ PARAM+ ▼ PARAM-

Parameter name:  Status:  Seq. no.:

Parameter val.:

Parameter Name	Parameter value
ztta/diag_area	20000000

Save and activate profile.

Restart NW ABAP to make the new values effective.
