

Initial setup of Personas 3 - 5 - Make personas namespace modifiable

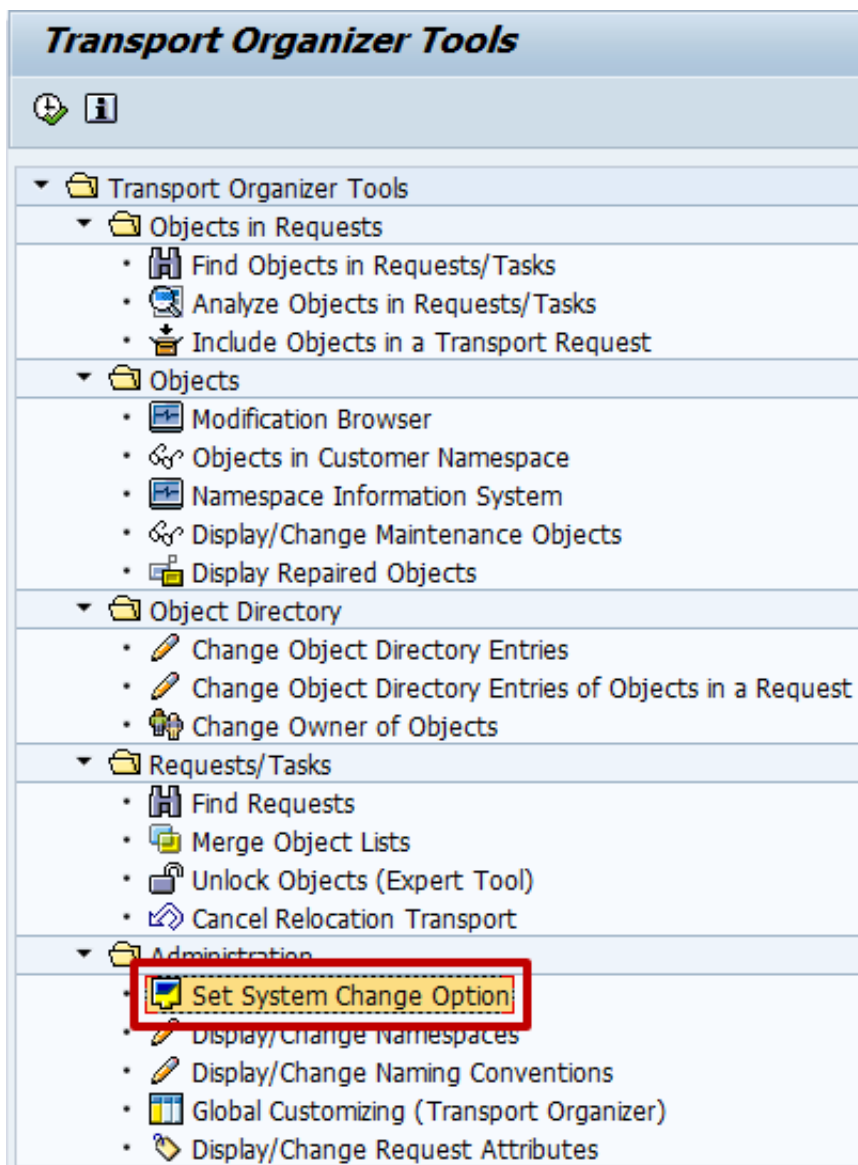

Author : Tobias Hofmann

Date : April 22, 2016

You will have to apply notes to be able to work trouble free with SAP Personas 3. There is no way to avoid this. Moreover, it will be many notes you will apply over the years. The notes will execute changes in the personas namespace, and that namespace is protected by default. Therefore, you need to make this namespace modifiable.

- Tx: SE03

Select option Set System Change Option in section Administration

A get presented a list of components and their namespace. Navigate to Personas namespace.

System Change Option

Client Setting

Global Setting: Modifiable

Software Component	Technical Name	Modifiable
